Braces

Congratulations!!! You have just begun the process of straightening your teeth and bite. This will lead to the lifelong benefit of a spectacular smile. Remember, we are a team in achieving our goals. Without your help, we will not be successful. Here is some important information regarding your braces. I like to call this my “Braces Survival Guide.”

Braces Survival Guide

- You are being provided with a kit that will help you adjust to your braces. This kit contains items that will help you keep your teeth clean as well as get you through the adjustment period.
- Braces are something completely new to your mouth. There will be a period of adjustment. For most patients, this usually lasts a few days. Expect that your teeth will get sore and you might develop some areas of irritation along your cheeks, lips and gums. You might also notice increased saliva and slight speech impairment. This is normal and will go back to normal. It’s like having a new pair of shoes that are a little snug in some areas. After wearing them for a few days, you get used to them.
- **Use these items to help you adjust to your braces:**
 - **Wax** is used to cover areas that are causing irritation. The wax will stick best if the area is dry before application. The area can be dried with a tissue or Q-tip. Take a small piece of wax between your finger and thumb and roll it into a ball. This will soften the wax and make it easier to apply. Just push the soft piece of wax on the area that is bothering you. Don’t worry if you swallow the wax. It won’t hurt you.
 - **Peroxyl or Warm Salt Water** can also be used to rinse (and then spit out) to make areas feel better. These will both help to keep irritated areas clean and help them heal faster.
 - During the first few days you want to eat a softer diet. This is more comfortable since your teeth might be a little sore.
 - Each patient is unique, and their needs are different. For some people, the use of an over-the-counter pain reliever similar to that taken for a headache can be used to help the soreness. If this is needed, it is usually only for a few days.
- **Cleaning your teeth and braces:**
 - Keeping your teeth and braces clean is one of the most important things that you can do to guarantee a good result. Poor oral hygiene during braces can lead to increased treatment time, poor overall results, and staining or cavities on the teeth.
 - You should try to brush your teeth after every meal. You are being provided with a **Travel Toothbrush** to keep in your pocket.
 - Use the **Proxy Brush** to get under the wires and above the braces. The area between the braces and gums is commonly missed by patients with braces. Be sure this area is clean.

- You need to **Floss** your teeth at least once a day while wearing braces. Use the **Floss Threader** or **Super Floss** to get the floss under the wire.
- The **Oral B Toothbrush** provided is specially designed for braces, making it easier to get around your wires and brackets. **You should be using your electric toothbrush EVERYDAY.**

Food and Drink Restrictions:

- Avoid sticky foods such as taffy, caramels, gummy candies, Starburst, and Skittles as they might loosen the bands. Also, avoid hard foods such as ice, nuts, and hard candy as these might cause a bracket to become loose. Only chew sugar free gum.
- Certain foods such as apples will need to be cut up and then eaten. Don't bite into an apple as this might cause your braces to become loose.
- Carrots can still be eaten, but they should be cut into long, thin pieces that aren't hard.
- Avoid crunchy bread or bagels.
- We discourage eating popcorn but if you do, only eat a piece at a time. This way you can make sure there are no kernels that you might bite down on. Rinse your mouth or brush your teeth after eating popcorn.
- Limit the number of sugary drinks and foods that you have in one day. Too many can lead to cavities. Rinse your with water mouth afterwards

Please read the information provided in your kit thoroughly. Remember that everyone goes through this initial period of adjustment. Taking good care of your braces and following our instructions will ensure a pleasant experience for both of us.

Emergencies

If you have an after-hours emergency that cannot be resolved after following the instructions provided, please the office at 503-362-0500 for the on-call emergency assistant. All instructions can be reviewed on our website at www.haveagreatsmile.com/instructions
